

Seismo-Watch

Earthquakes for week of
March 23 - 29, 1997

	1-2	2-3	3+	Total
Regional	11	3	3	17
Mammoth Lakes Region	22	1	0	23
This Week	33	4	3	40
Previous week	34	8	2	44

▼ **Regional Activity:** The largest earthquake measured M3.4 and occurred early Saturday morning 10 miles SE of Minden in the Double Springs Flats aftershock zone. It was preceded by a M3.1 event five days earlier about 6 miles to the SE. The quakes are likely to have been felt but passed without any reports. Since the Double Springs Flats M6.0 earthquake in Sept. 1994, and both the Holbrook Junction and Antelope Valley earthquake swarms of the last couple of years, nearby residents are getting accustomed to a light tremor now and then.

▼ A M3.2 quake triggered W of Bishop. It was felt.

▼ **Mammoth Lakes Region:** The total number of event remained the same as the previous week, but the intensity of seismicity reduced significantly.
